Languages (Spoken)

- English (Fluent / Native)
- Mandarin Chinese (A1 Elementary)
- Hungarian (B1 Proficient)

Technical Skills

Languages: JavaScript, TypeScript, Python, Java, C, C++, C#, Lua, SQL, HTML/CSS
Frameworks & Data: Node.js, Express, Prisma ORM, SQLite, PostgreSQL, MySQL, REST APIs, Hugging Face
Tools: Git/GitHub, VS Code, Vercel (deployment), Unix CLI
AI-Assisted Development: Claude (incl. Claude Code), GitHub Copilot

Relevant Strengths & Skills

Web design; Debugging; Unit testing; UI/UX; Database/schema design; Clarity in writing; Familiarity with multilingual data + cross-cultural communication; Manual code reviewing

Interests

- Full-stack development
- Graphic design
- LLMs, NLP, and GenAI
- Video game development

Erik Zoltan Lajko

Recent graduate (B.A. Linguistics, Computer Science minor, 3.96 GPA) who builds full-stack applications and data-driven systems. Open to junior roles in web development, data engineering, video game development, and general software engineering.

Projects

Agentic Album Classifier — TypeScript, Next.js, Vercel AI SDK, Vercel Blob
<https://github.com/elajko/Agentic-Album-Classifier>

Agentic image gallery that zero-shot classifies uploads into albums it invents on the fly, using a hosted multimodal LLM (Claude/GPT-4o-mini) for classification and Vercel Blob for serverless storage. Re-evaluates borderline images automatically whenever a new album is created; handles API key expiration and bring-your-own-key auth without ever persisting a raw key to disk.

Supervised ETL Image Classifier — Python, FastAPI, Playwright, PyTorch/OpenCLIP
<https://github.com/elajko/Supervised-ETL-Image-Classifier>

End-to-end ETL pipeline that scrapes images from the web and filters them with a supervised classifier trained live during extraction. A FastAPI backend embeds each scraped image with OpenCLIP and scores it with a scikit-learn classifier, while a browser frontend collects accept/reject feedback that retrains the classifier in real time, removing the need for a separate offline training phase.

Theme-Space Language Encoder — JavaScript
<https://github.com/elajko/Theme-Space-Language-Encoder>

Rule-based NLP pipeline that encodes sentences into a language-agnostic "theme space": a JSON representation mapping predicates to a universal inventory of actions/events, tense/aspect/mood, and thematic roles. Implemented as a tokenizer, lexer, verb-group resolver, chunker, and semantic mapper over a customizable lexicon dataset.

Experience

Junior Developer (Sept 2024 – Present)
@ LUMAER Cybersecurity Solutions, Rockville, MD

- Collaborated with a client in designing the frontend for their live vehicle auction platform (redlineauctionsusa.com); zeroed in on the brand's identity, revised written sections, and designed the company logo.
- Collaborate with developers using Git for version control.

Research Assistant (June 2025 – Apr 2026)
@ University of Maryland, College Park, MD

Annotated linguistic data collected from field recordings of the Mayan language Tz'utujil, building structured datasets for ongoing language research.

Team Captain / Design Lead (2020)
@ Wilson Hacks (Facebook), Blair Hacks, hackUMBC

- Led teams in timed, collaborative programming competitions.
- Handled both technical implementation and visual/UX design under deadline pressure.

Education

B.A. in Linguistics (Grammars & Cognition), May 2026
Minor in Computer Science (Cumulative GPA: 3.962)
@ University of Maryland, College Park

Relevant Coursework: Object-Oriented Programming; Computer Systems; Phonetics; Phonology; Algorithms; Discrete Structures; Artificial Intelligence; Grammar & Meaning; Organization of Programming Languages; Software/Network Security and Cryptography

Hungarian Language and Culture Summer Course, Aug 2024
@ University of Debrecen (study abroad)
